Summary

Organized software engineer with strong problem-solving skills, passion for cutting-edge technologies, next-gen graphics, and AI. Computer Science graduate with an MSc in Computer Games Engineering. Experienced in gameplay development, editor tooling, and engine-level work.

Experience

Outfit7

Limassol, CY

SOFTWARE ENGINEER

Sep. 2021 - Present

- Feature owner in agile teams, delivering gameplay features across multiple projects using Unity and Starlite (in-house Game Engine in C++).
- Developed custom editor tools to automate repetitive developer and QA tasks using C# and C++.
- Optimized legacy code with performance, scalability, and maintainability in mind.
- Responsible for migrating and updating internal libraries.
- Updating, maintaining, debugging and profiling code in large codebases
- Writing unit tests and integration tests to ensure robust implementation
- Writing and maintaining multi-platform codebase including Android and iOS

Education

University of Newcastle

Newcastle, UK

MSC IN COMPUTER GAMES ENGINEERING (DISTINCTION)

Sep. 2019 - Nov. 2020

Advanced Programming for Games C++, Advanced Graphics for Games, Advanced game technologies.

University of Reading

Reading, UK

BSC IN COMPUTER SCIENCE (2:1)

Sep. 2016 - Jul. 2019

Virtual Reality, Artificial Intelligence, Mathematics for Programming.

Projects

VR for Drug Network visualisation

VIRTUAL REALITY - GRAPH VISUALISER (VR-GV)

Sept. 2020

- Using Unity and C# I implemented a software that draws graphs in VR space for data exploration. The software aims to help trained scientists explore and understand relations between protein interactions in large scale datasets.
- VR-GV demonstrates a variety of drawing algorithms including a forced-based drawing and a circular layout.
- https://www.youtube.com/watch?v=Yv4q_IP3_2A

Physics Engine, AI, Networking

CREATED A PHYSICS-BASED GAME IN C++. THE SOFTWARE IS CAPABLE OF:

Dec. 2019

- Raycasts, Collision Detection and Response
- Linear and Angular motion
- Quad Tree Spatial Acceleration structure
- Pathfinding algorithm
- <https://www.youtube.com/watch?v=orvMmOUUNgU>

Rendering engine in C++, OpenGL

DEVELOPED A RENDERING ENGINE IN C++ AND OPENGL. DEMONSTRATION OF:

Nov. 2019

- Shaders for texture blending, Lighting calculations for ambient diffuse and specular components
- Post processing effects: Blur, Split screen, and Sobel's Edge filtering
- Shadows, Reflections and Cinematic automated Camera movement
- https://youtube.com/watch?v=kYYkThFDk_4

Skills & Tools

Programming Languages: C++, C#, GLSL

Web Technologies: HTML, CSS

Tools: Unity, Visual Studio, Rider, Git, CircleCi, Slack, Jira.

Soft Skills: Communication with team members and cross department members.

Clear understanding of tasks and product requirements.
